SIGMA DRACONIS III: VOLCANIC
HOSTILE DIAMETER: 12,104KM
GRAVITY 0.9036 PLANET AGE:
500 MILLION YEARS
ATMOSPHERE: CARBON DIOXIDE
METHANE SULPHURIC ACID
SURFACE FEATURES: VOLCANIC
TEMPERATURE: 900 FAHRENHEIT
MOONS: FIVE PLANETARY
ENVIRONMENT: VERY HOSTILE
CHANCE OF SURVIVAL:
BLEAK...VERY BLEAK

OUTPOST ™

SIERRA®

1 Turn on your computer and your CD-ROM drive (if it is separate from your computer).

2 Start Microsoft® Windows™ (usually by typing win at the MS-DOS prompt). In case of problems, see your Microsoft Windows manual for further instructions.

3 Insert the *Outpost* disc into the CD-ROM drive.

4 Open the Program Manager window, if necessary, and then choose "Run" from the File menu.

5 In the Command Line box, type the drive letter for your CD-ROM drive, the colon (:), and \setup. (For example: d:\setup). Press [ENTER] or click "OK."

6 You will be asked to select a directory in which to install *Outpost*. The default directory is c:\sierra\outpost. You may, however, select another drive and directory if you desire by retyping the new drive name and directory in the Command Dialogue box. (For example: c:\game\outpost). After selecting the subdirectory press "OK."

7 You will be asked the type of installation you prefer. Choose one of three alternatives:

• Operate completely from the CD: *In this option, nothing will be copied to your hard drive but saved games.*

• Small Installation: *Most frequently used files will be copied to your hard drive. This installation will use approximately five megabytes of hard drive space. (Refer to your* Outpost *manual for the exact hard drive space used.)*

• Large Installation: *All frequently used files will be copied to your hard drive. This installation will improve your*

performance but use approximately twenty megabytes of hard drive space. (Refer to your Outpost *manual for the exact hard drive space used.)*

8 The *Outpost* setup program will create an *Outpost* group window within the Program Manager and program. In this window, you will see an icon for *Outpost* and a ReadMe file. Read the ReadMe file for current changes and modifications before playing the game.

9 Click on the *Outpost* icon to begin the game.

Saving your game

1 After the introductory segment, you can click (using your right mouse button) in the main *Outpost* window to display the Default Dialogue box.

2 Click your mouse (using the left button) on "File." One option shown will be "Save." If you wish to save your game without renaming it, make this selection. Your game will automatically be saved.

3 If you wish to rename the game before saving it, click your mouse (using the left button) on "File." Select "Save As." You may now rename the game with a name up to eight characters.
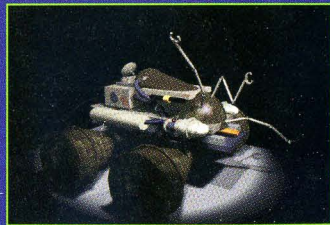

The legacy of Earth depends

upon your survival.

Based on current NASA

research in planetary science, robotics,

terraforming, and interstellar spacecraft design,

Outpost™ places you in control of the most

comprehensive strategy

simulation ever

developed for the PC.
